## **Perfect climate for travelling Ventilation and fire protection technology at airports - Comfort and safety for passengers**

Airports are huge complexes with many and diverse requirements on ventilation and air conditioning. They are 'places of public assembly' and hence subject to safety regulations that ensure sufficient fresh air by mechanical ventilation and air conditioning systems. In the event of a fire, such systems also aid in the mechanical smoke extract in order to keep escape routes free from smoke.

At TROX, we are committed to providing flexible and adaptable solutions for all areas of airports. The main focus is on airport terminal ventilation, control, and fire and smoke protection. The requirements on air in the office buildings, restaurants, and shops at an airport are no different from those of other buildings where people go for work or leisure.

Be inspired!
